*** Extended Ranges for Temperature and Humidity

Upon users request GEO is Offering the extended ranges for both Temperature and Humidity which are as following:

EXTENDED CONTROL RANGE			
TEMPERATURE	2 °C to 58 °C (Normal is 5 °C to 55 °C)	**HUMIDITY@ 35°C**	2 % to 80 % RH (Normal is 5% to 80%)
HUMIDITY@ 18°C	2 % to 95 % RH (Normal is 5% to 95%)	**HUMIDITY@ 40°C**	2 % to 75 % RH (Normal is 5% to 75%)
HUMIDITY@ 23°C	2% to 98% RH(Normal is 5% to 95%)	**HUMIDITY@ 50°C**	2 % to 60 % RH (Normal is 5% to 60%)
HUMIDITY@ 30°C	2 % to 85 % RH (Normal is 5% to 85%)		

1.The Temperature ranges are not guaranteed if the environment Temperature is not controlled to 23 °C. User will see stable and extended results if environmental temperature is controlled at 23 °C or 72 °F. The normal temperature working ranges in Model 2000SP are 18 °C to 28 °C for different Humidity ranges. The Extended Ranges can help the user to test Hygrometers for lower or higher temperature values, although for Rh it may not be a great use at the extended temperature ranges.

2.The Humidity ranges are affected by the temperature especially for the high humidity above 70%. On high humidity if the temperature drops, it can go to Dew Point and can form the Condensation. To prevent condensation, user must bring the temperature to desired value first and then bring the Humidity to desired value. The extended Rh ranges are offered for the Hygrometers that needed to be calibrated below 5% or above 95%. It will not get the best calibration tolerances because the probe goes out of linear range.
Note: To go to the lower Rh, such as 2%, user must make sure the Desiccant is reasonably good. For high Rh, such as 98%, user have to use the insulated door only.

3.The following table shows the order how user should set the set points to get the best results without getting the Dew Point condition or Condensation , avoiding the unnecessary use of Desiccant and make the system more efficient.

Table Temperature vs Humidity relationship and how to get the best result:

Temperature	**Humidity**
NO Change	Set Rh Hi/LO within Specification Range
Low to High	Set Rh Hi/LO within Specification Range
High to Low	If Rh is Higher than 70%, Set Rh to 70% first. Set the temperature to desired value and then Set Rh to desired value within Specification Range
